

incoming requests are arriving from the Flask framework

Application code

App.py

App.py contains the routes and logic so that it understands how to react to a users requests.

The templates control how the user interacts with the application e.g styling, how it behaves, the inputs and outputs etc.

Templates

CSS

HTML

Jinja2

Trello.py

Trello.py talks to Trello on behalf of the user. The requests that are sent to Trello are authenticated.
